## Restore XML from simulator

System can be restored via the XML file from a simulated processor.

Simulator XML folder address:

C:\Barco\Event Master Toolset Rev 4.0 (Build 28447) or different software version\wvp\_9876

Put the "xml" folder from the VP simulator on a USB stick in the path "EM/backup/xml/"

Open the xml folder and rename the xml file setting to settings\_backup.

Connect the USB to an E2 / S3-4K. On the front Panel go to system menu/ USB Backup/Restore menu of E2 or S3, select "Restore XML" at the bottom of the menu. Select yes for "system restore done. Reset unit now?"
